

# 3B Putty and Plugs

- Non toxic and pre-mixed
- Quickly seal and stop accidental leaks
- Controls flammable and hazardous leaks and spills
- Nontoxic and pre-mixed -- no kneading, no curing, no surface prep required
- Once saturated the soft wood will swell out slightly, conforming to the shape of the area to be sealed.
- Sticks to greasy, rusty or dirty surfaces.

## For Sealing Fuel Tanks or Crossover Line Breaks.

A combination of a high sorptive polymer in a bentonite base. The polymer produces a protective seal against penetration of fuels, chemicals and other fluids. Scoop out and apply to instantly stop leaks. In cases such as tank punctures, wooden plugs can be jammed into the hole to minimize fluid release before the putty sets and create an initial seal. A "born on date" stamped on label, good for 2 years after date.

### FOR USE:

- For fuel tank punctures
- Stop crossover line breaks
- Place in glove compartments
- Emergency response
- Great for spill kits
- Add to toolkit
