

Veribor® 1-cup suction lifter made of plastic

Technical Data

Type of vacuum generation	Lever-Activated Suction Lifters
Load capacity	55 lbs (25 kg)
Lifting direction	vertical
Material of Suction Lifter	Plastic
Surface geometry	flat
Suction pad	ø 4-3/4 in (ø 120 mm)
Number of suction pads	1
Vacuum gauge	no
GS certified	no

Description

Ideally suited for small surfaces: The 1-cup suction lifter offers a firm hold in all instances where there is not enough space for attaching a 2-cup suction lifter. Thanks to its one-hand operable lever system, the device convinces especially due to its easy and extremely fast handling. In addition, the grip lies perfectly in your hand. The high-quality, PAH-free rubber pad in proven Bohle quality is the decisive quality attribute. It is dimensionally stable but still soft enough to adapt to the surface during vacuum generation. The 1-cup suction lifter is suited for loads of up to 25 kg (two-fold safety factor) and can be used for all materials and objects with gastight surfaces.

- Veribor® is a quality brand of Bohle Group. The products are developed and manufactured exclusively in Germany – with a special focus on safety and ergonomics. They are free from carcinogenic hydrocarbon compounds (PAH).
